

MnI – CONVENTIONAL DIGITAL CONVERGENCE UTILIZING DAO

DEMOCRATIZED FINANCE SYSTEM

NOVEMBER 5th, 2022

STRICTLY CONFIDENTIAL

“

MnI is the first of its kind business model adopting conventional digital convergence (CDC)

Real world returns from real world entities, bridging conventional to digital.

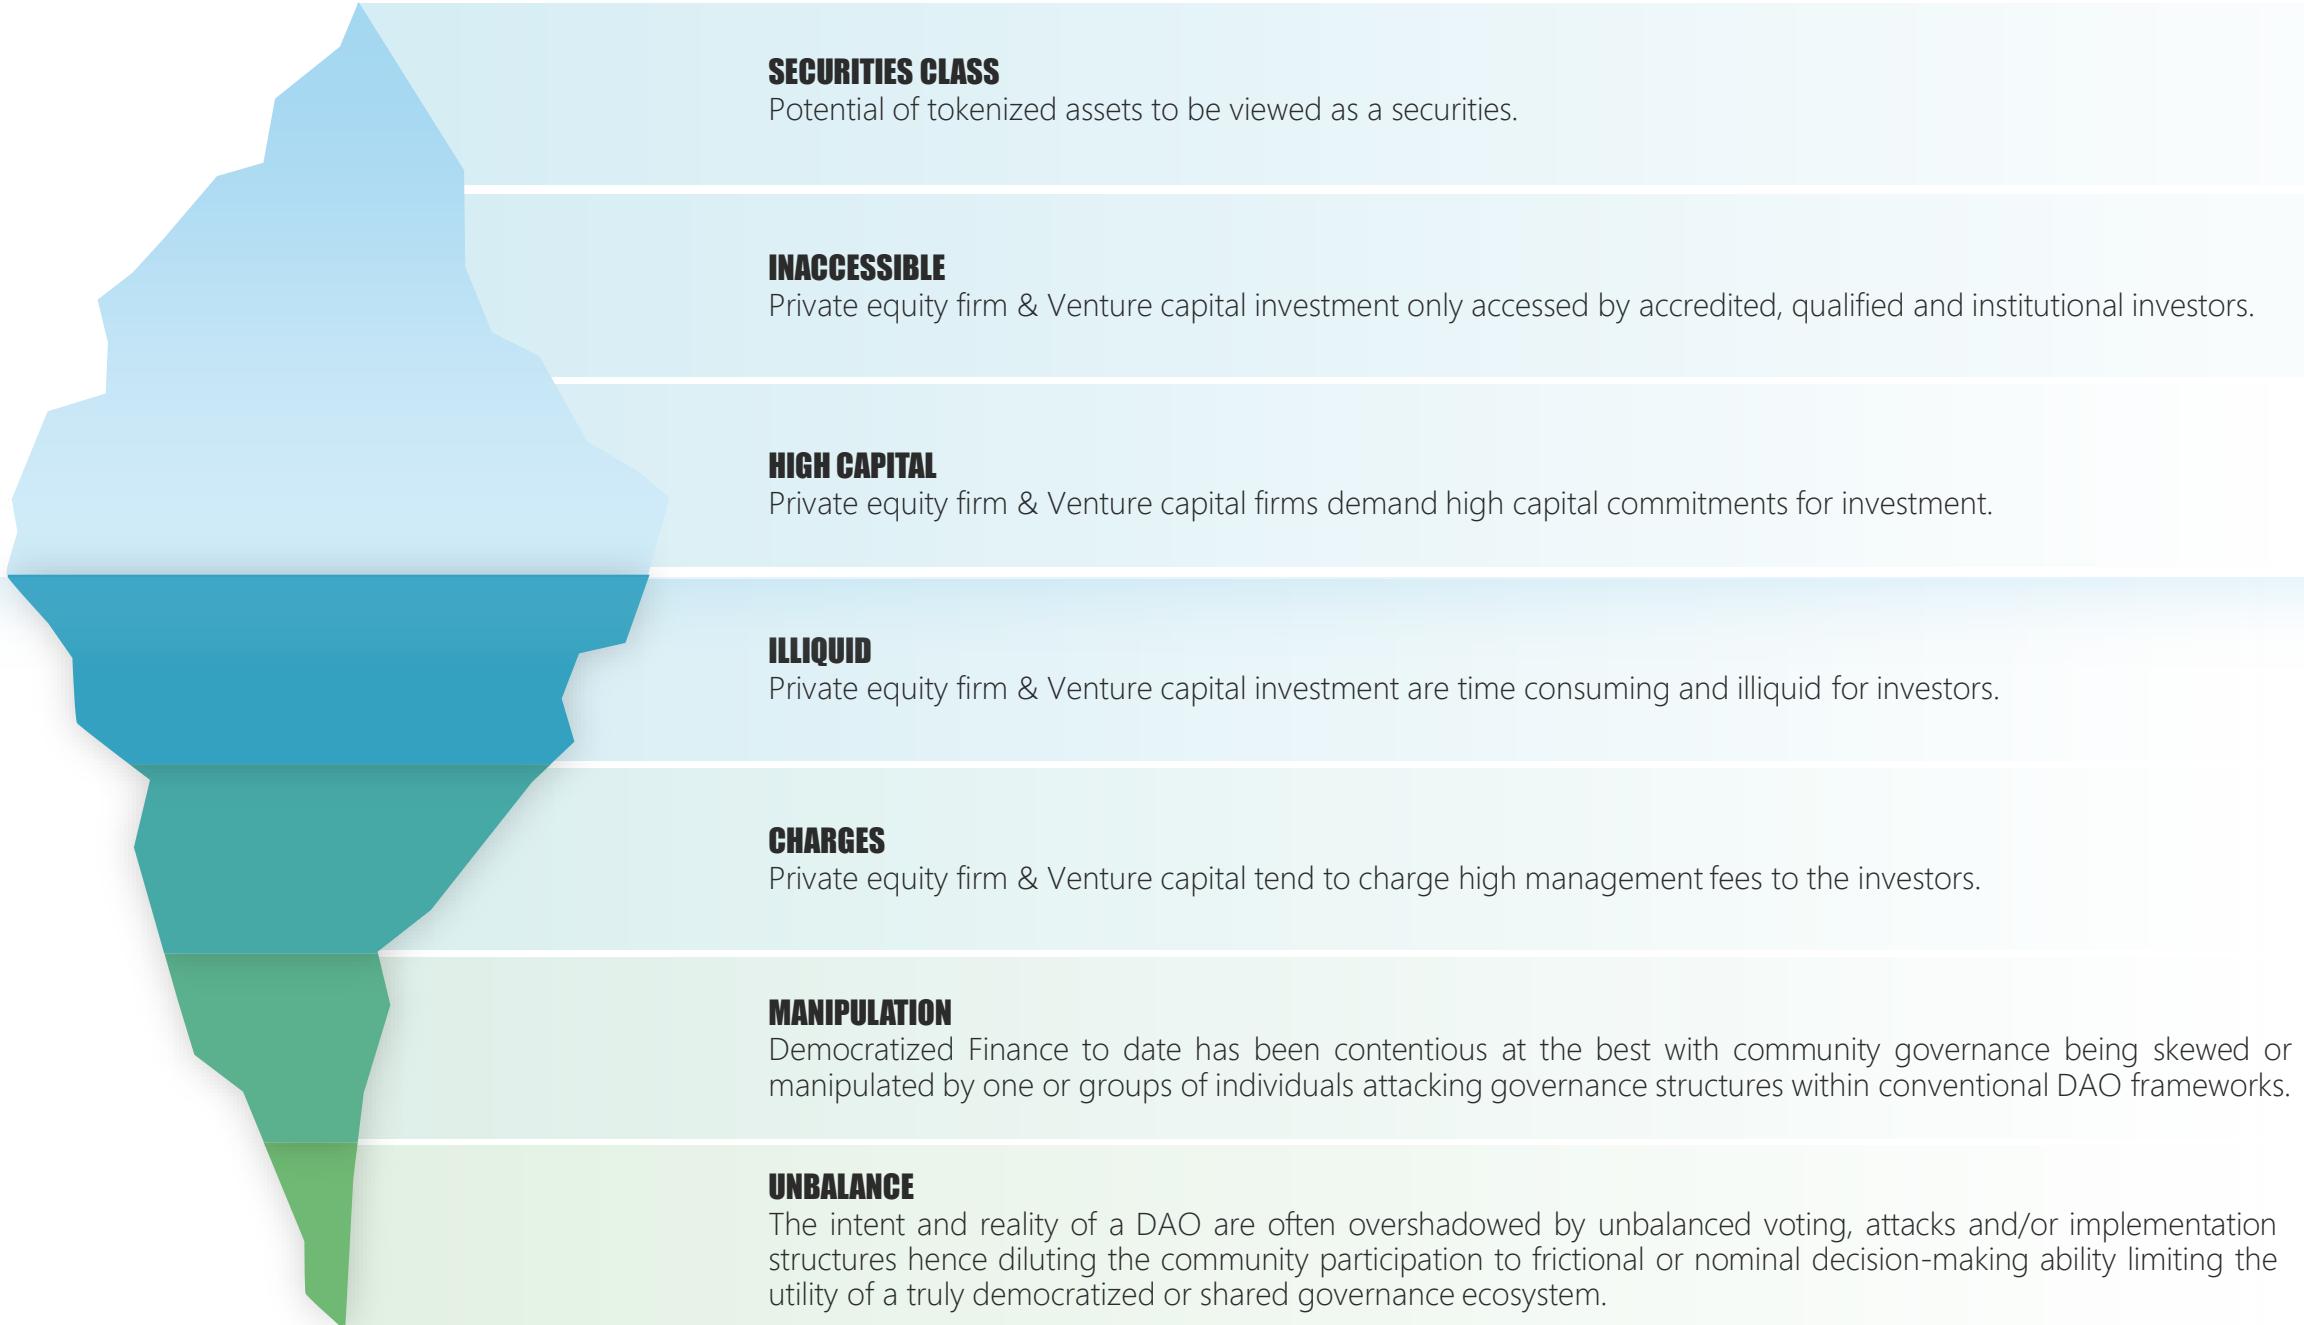

- Wayne Wilson

THE CHALLENGES

OUR SOLUTION

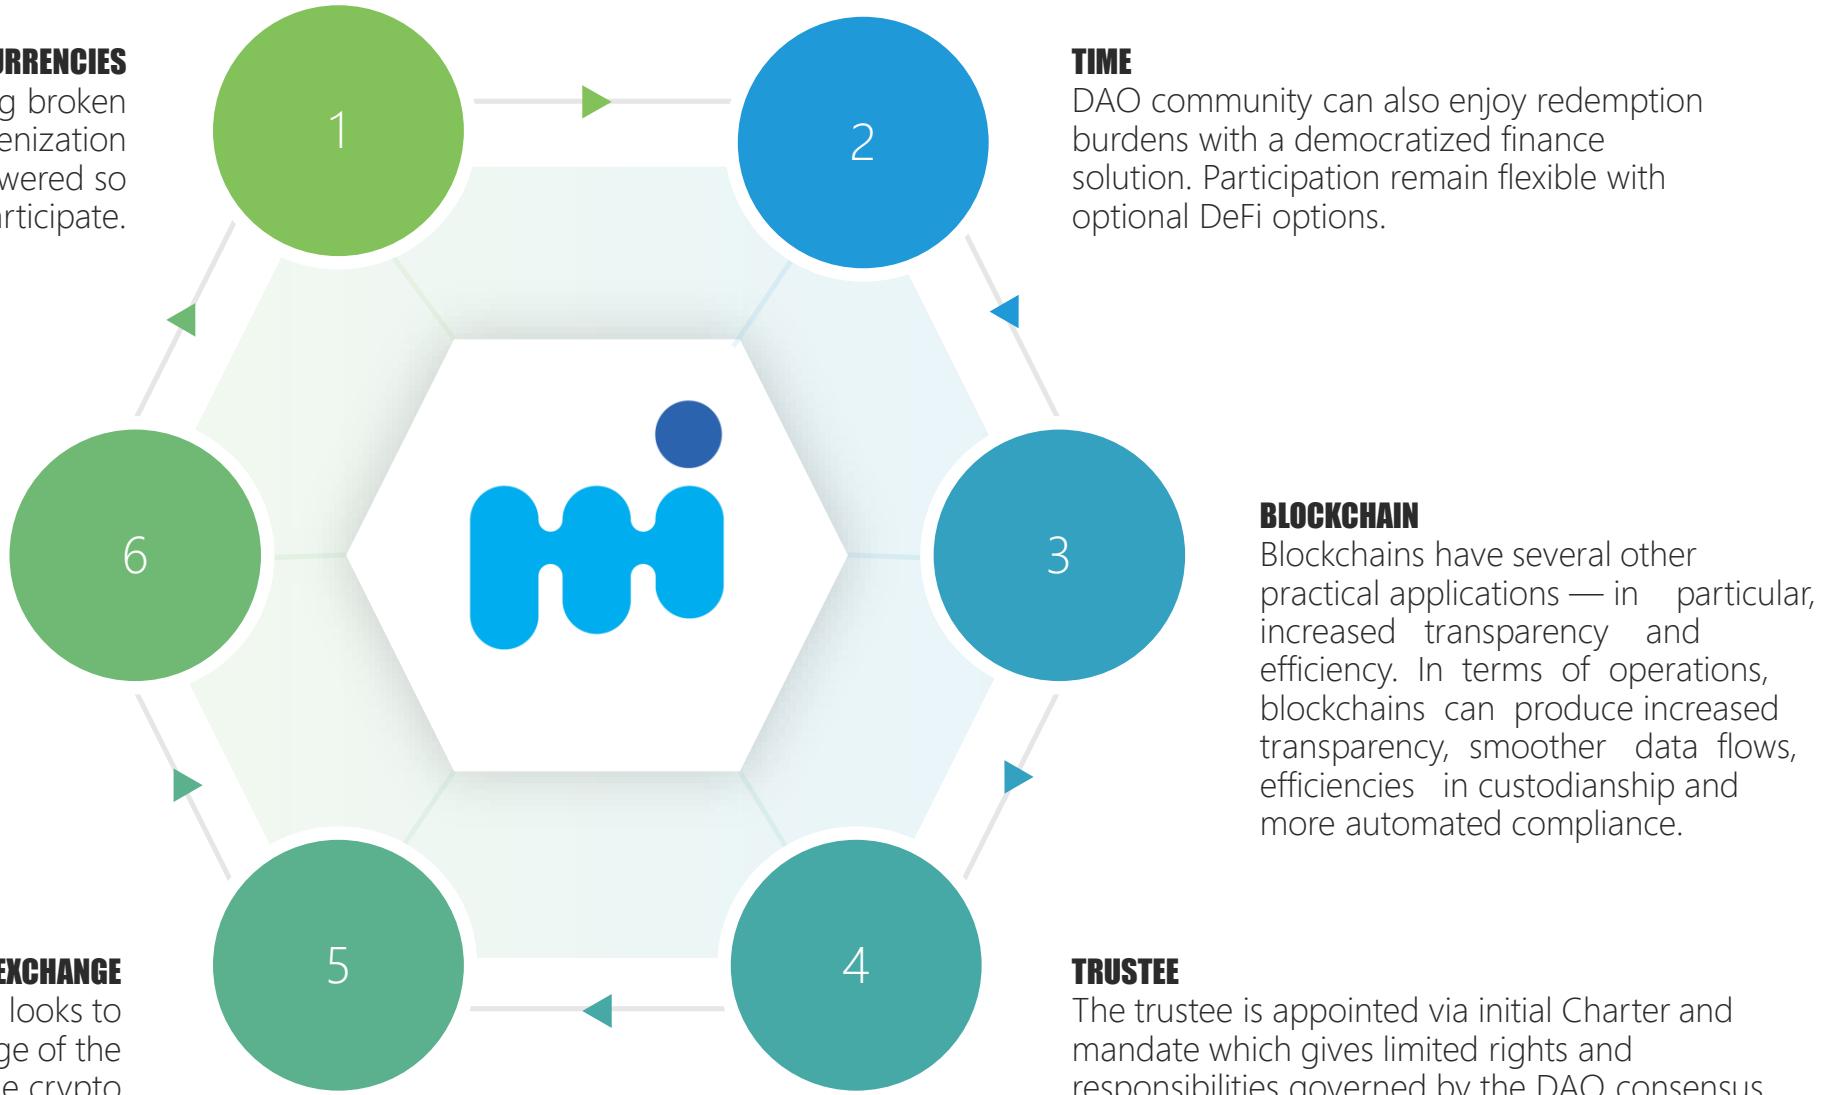

Perfect Timing

The era of digital economy 4.0

AI & Blockchain transform all

industries & business around

the world

Mnl Token Utility

Mnl is a community-enhanced ecosystem smart contract token that is tradable on Centralized and Decentralized Exchanges. Each DAO member has the ability to interact in the entire ecosystem and direction in all aspects pertaining to Mnl.

Smart Contract

Unique smart contract built on Democratized Finance principals for all holder's benefit.

MNI Democratized Finance Principled Smart Contract Features:

1. Blacklist and Unblacklist Address

Apply in DEX and Regular Transaction (send and receive)

2. Antidump

Apply in DEX

3. AntiWhale

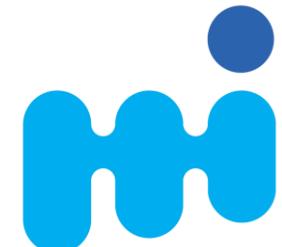

Apply in DEX

4. Max Buy and Max Sell

Apply in DEX

5. Buy Tax and Sell Tax

Apply in DEX

6. Tax Address

Receive Buy Tax and Sell Tax via DEX Transaction to DAO treasury

7. Receiver Address

Receive All Token Supply

8. Whitelist and Unwhitelist

Apply in DEX and Regular Transaction (send and receive)

9. Pause and Unpause Transaction

Apply in DEX and Regular Transaction (send and receive)

DAO to set variable parameters and percentages in the smart contract

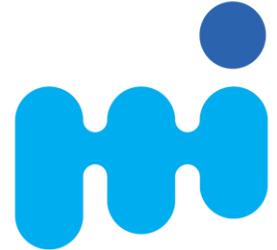

SELF GOVERNANCE in the DAO is achieved by qualifying your MNI Token within the DAO to create your governance token, giving you full participation in the direction and governance of the DAO.

The **NFE** (Non-Fungible Equity) represents a portion of diverse real-world business assets and works to minimize risk, accumulate and distribute DeFi allocations in the DAO according to the governance portfolio management rules.

NFE will be transparently registered in BVI as a Securities Class and insured for 70% of the value.

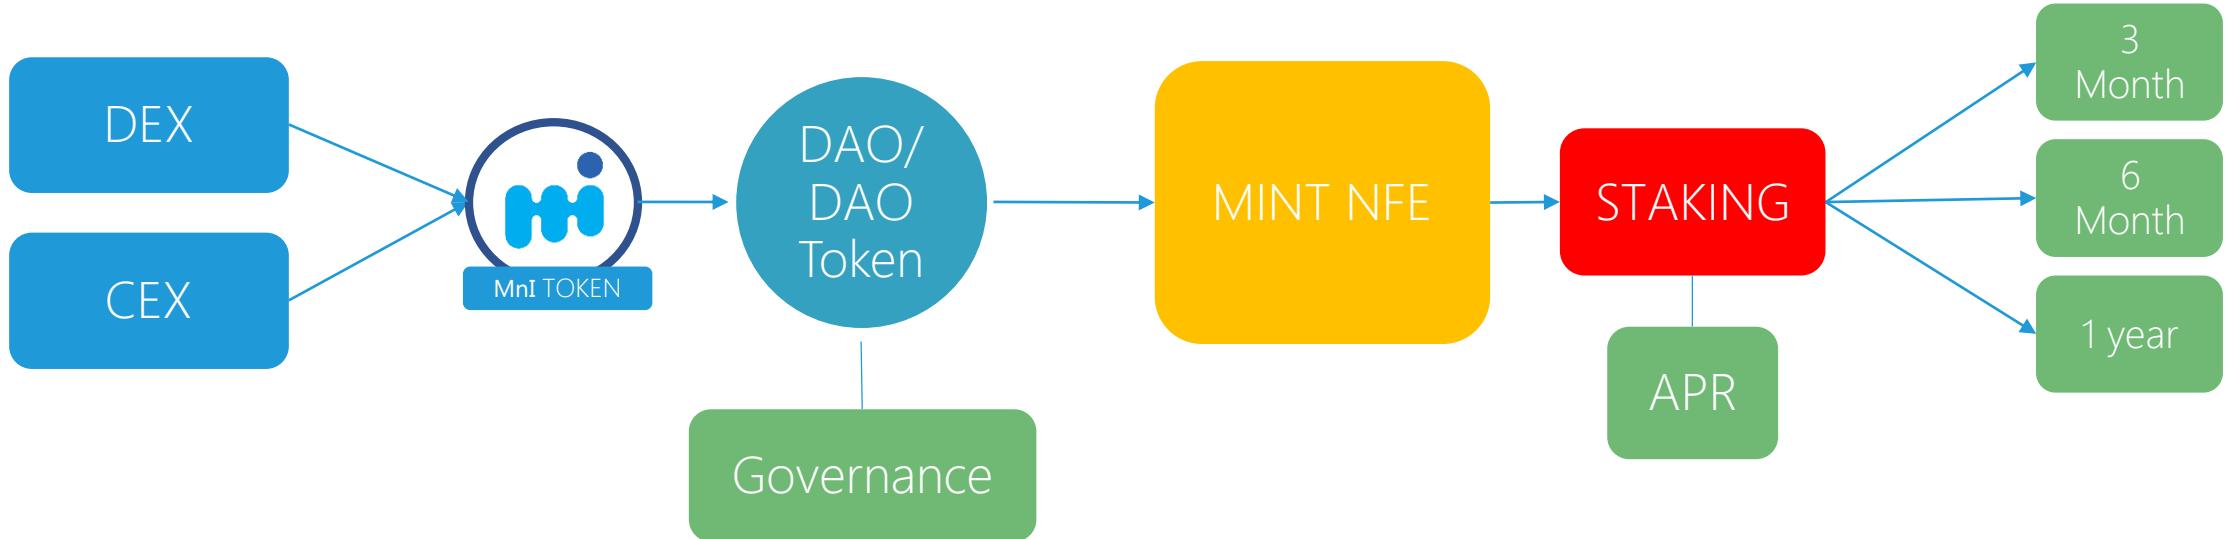

Additional selected NFE participation – An NFE (Non-Fungible Equity) is created by storing Mnl tokens. The NFE is fully transferable and can be staked to earn **APR** in Mnl Token pegged to USD Value.

APR follows adoption and distribution associated with NFE and DAO Governance according to the entire ecosystem and business model.

ENTRY PROCESS

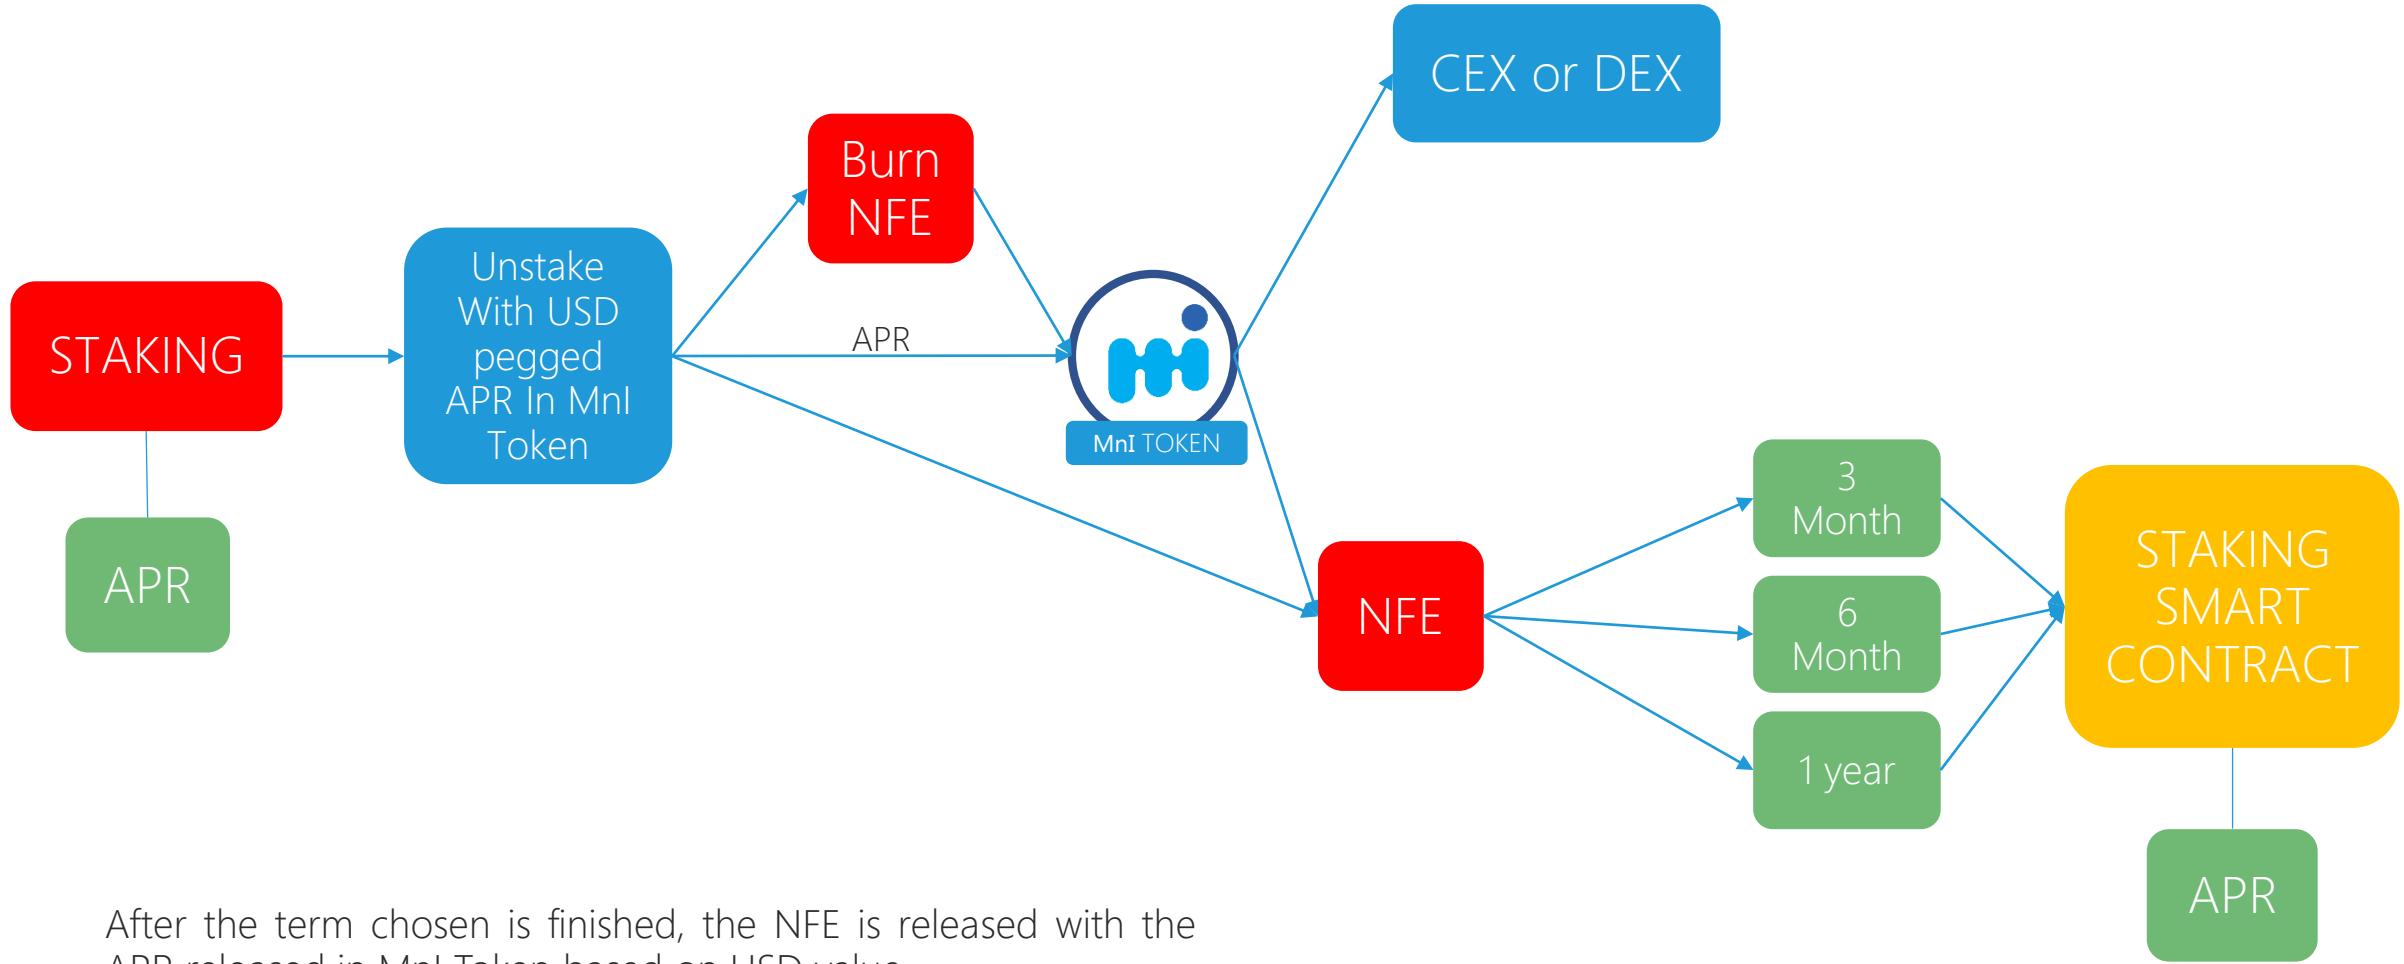

Seamless process for users

ENTRY PROCESS

1. User acquires Mnl token from CEX or DEX
2. Mnl holder qualifies the Mnl token in the DAO creating Governance Token and DAO Rights.
3. Mnl token can be stored within an NFE for safety, security and to reduce movement and transfer fees.
4. OPTIONAL DeFi staking of the NFE will generate a variable APR.

EXIT STAKING PROCESS

After the term chosen is finished, the NFE is released with the APR released in Mnl Token based on USD value.

User can choose to burn NFE and release the stored Mnl token to add to their APR Mnl Token and either re-stake with new NFE or send to CEX or DEX

BUSINESS MODEL

“

To address limitations in conventional business investments, we have created a new ecosystem that integrates with unique participation structures. The result is a novel solution that has the best of both worlds. The Mining and Infrastructure (“**MnI**”) ecosystem includes commercial properties such as hotels, resorts, retail property and government-backed land projects into one ecosystem. It enables holders of its utility token, called **MnI** token, to share in a diversified economy and thus benefits from Defi using staking activities in a manner not traditionally available. Through this ecosystem, we will provide maximized liquidity, security, transparency, accessibility, efficiency, and DeFi options using staking to our token holders. We accomplish all of this by creating a completely unique structure that is augmented with blockchain technology using this innovative technological application.

06

Exchange Support

The MnI business model further looks to expand by taking advantage of the developments not only within the crypto space but also supporting exchange structures such as CEX' s and DEX' s.

CEX

A conventional approach is applied to CEX exchanges by driving community growth and trading participation, creating volume and stability within this environment, lending itself to greater market adoption and credibility.

DEX

DEX exchanges are utilized with a tax structure to grow the DAO governed ecosystem amplifier wallet. This is used to acquire or participate in real-world businesses, meeting the required parameters of the community expanding the portfolio and value streams. This allows the ecosystem amplifier to grow and expand cash generating real-world portfolios without impacting circulating supply.

Price Stability

By doing so, this alleviates the DAO releasing new circulating supply to the market and potentially impacting the price stability of the **MnI** token while still effectively allowing the portfolio to grow simultaneously

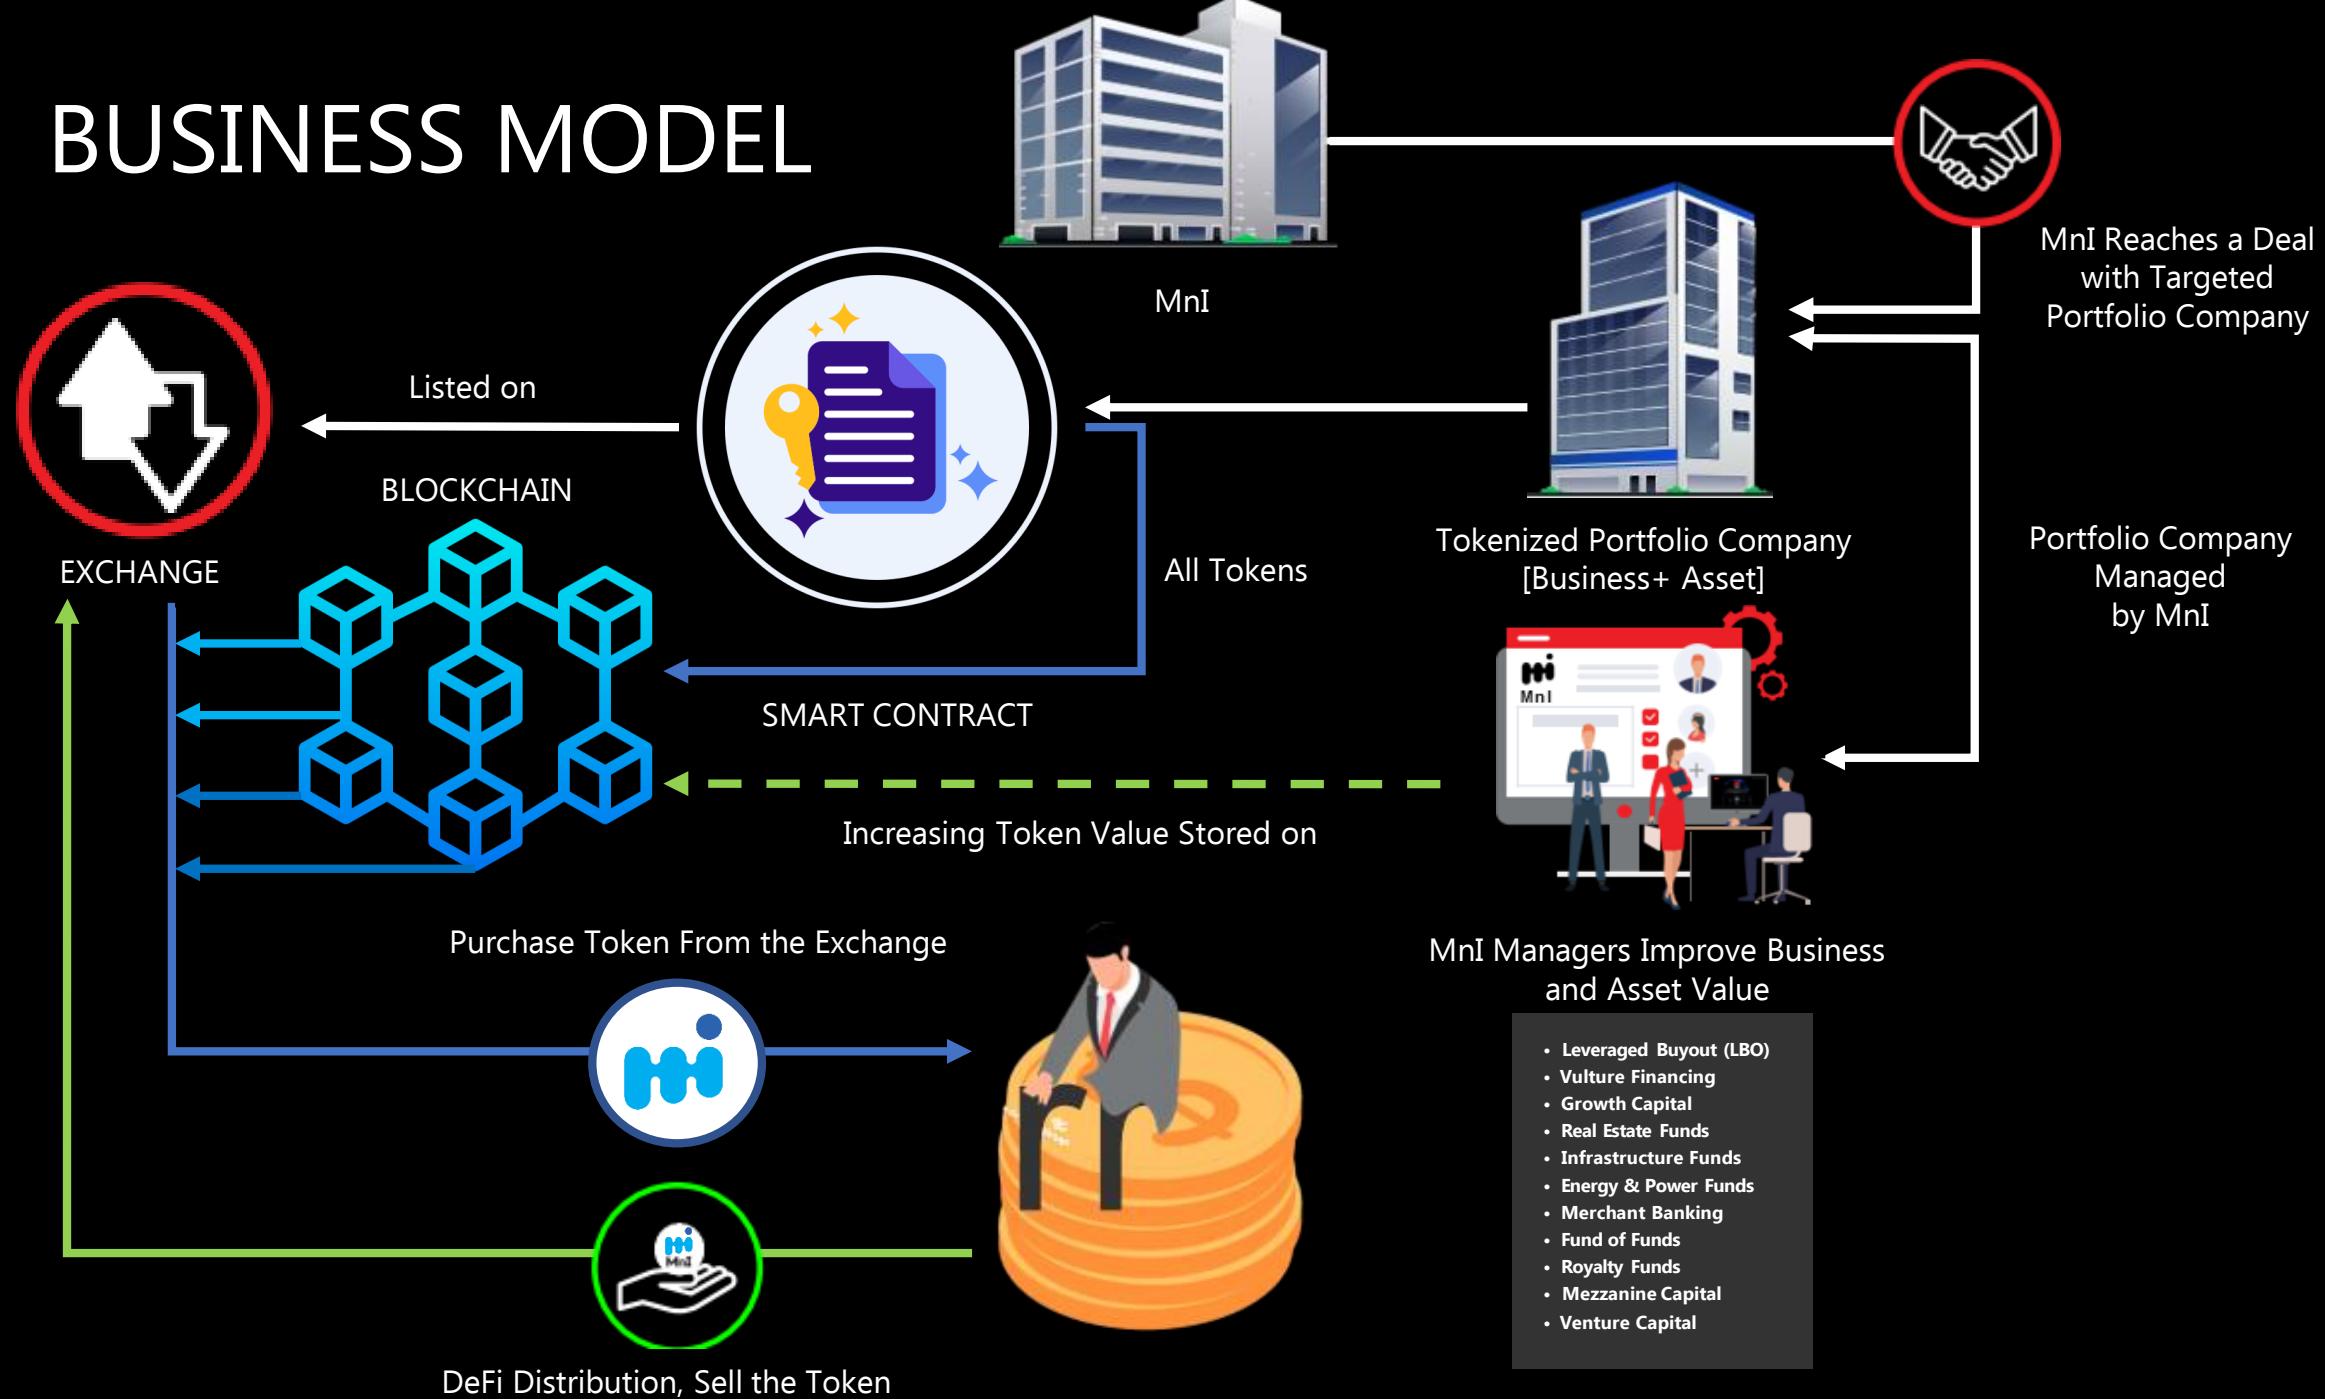

Protection

This protects the longevity and life span of the token expansion ability, allowing a greater portfolio and potentially higher value of each **MnI** token catering to long-term value and adoption within a truly tokenized economy. To ensure arbitrage opportunities are limited to deposit and withdrawal, a tax will be applied in line with DEX % on all CEX exchanges.

Democratize Finance

Democratized Finance governed, established using independent 3rd party DAO systems to ensure independence and is fully controlled by the community.

BUSINESS MODEL

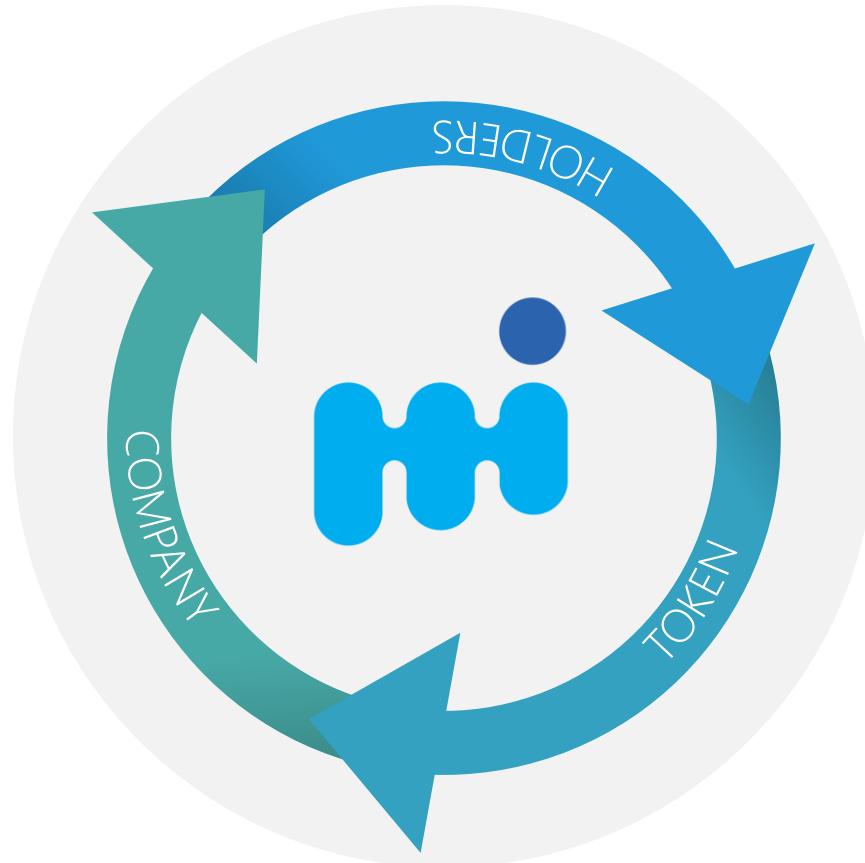

OUR ECOSYSTEM

ECOSYSTEM

Three Elements

HOLDERS

Revenue staking is generated annually as over all % to the **MnI** token holders in the form of **MnI** tokens distributed quarterly.

TOKEN

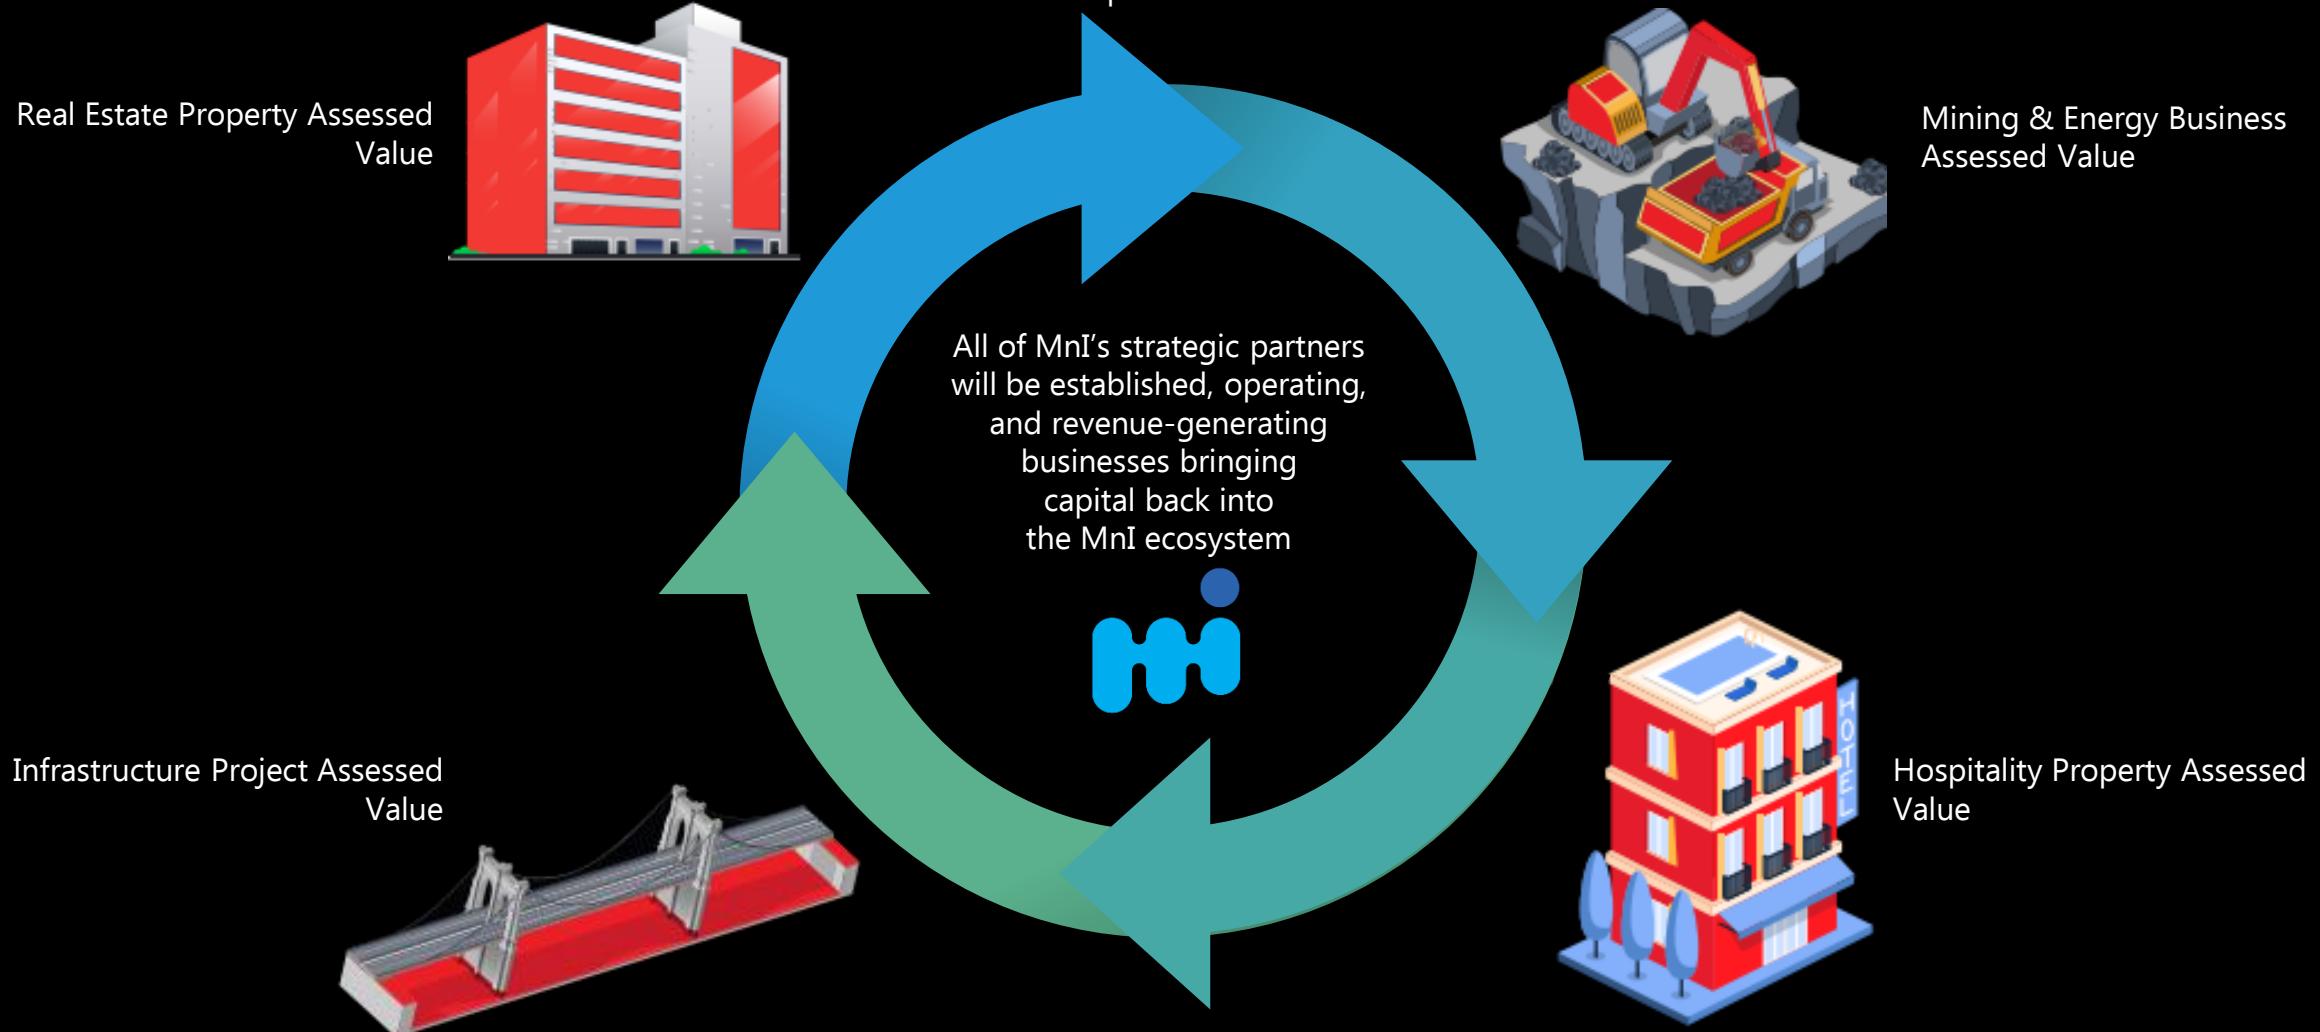

The initial token listing value is \$0.10.

COMPANY

The revenue staking is generated annually from participation in businesses and the APR distributed per quarter.

How are revenues generated: 1. By the value of the market price, 2. By affiliates activities, such as partitipations 3. By re-allocation of revenues back to MnI token economy

Thus, MnI tokens drive the robust MnI ecosystem, supporting adoption of the MnI Token for use in value distributions and other transactions by all MnI affiliates and strategic partners.

ASSESSMENT CRITERIA

OPTIONAL NFE ON RAMP OFF RAMP

The real revenue generated as per the DAO Governance from the backed commercial asset is an operating business for the benefit of NFE Stakers referred to as APR. This responsibility is held by the local legal entity as per the charter and mandated by the community to oversee operations and responsibilities within that designated region. Operating once again as only a vessel and a facilitator on behalf of the community as agreed via the DAO Governance.

Once local entity has converted the Fiat to Crypto (stable coin \$ 1:1) the funds are used to support and distribute APR. This is distributed in MnI token by supported the real Fiat which has been converted to Stable, which helps to flush out exposure.

Example: MnI token value \$1
APR \$1m

\$1m Fiat = APR in MnI to be distributed from DeFi Allocator Reserves = 1m MnI

The Fiat which has been converted will act in the open market to acquire the 1m MnI APR tokens, helping flush out the exposure and selling pressure. Once 1m Token from open market is acquired, it will be deposited back to the DeFi Allocator Reserves for redistribution.

Any additional token that can be acquired from open market will be deposited back to the DAO Ecosystem Allocator Reserves.

This system ensures that's a true DeFi model is created and supported by real value, protecting the entire ecosystem allowing greater growth and value appreciation.

VESTING SCHEDULE PRE-SALES 3 MONTHS LOCKED

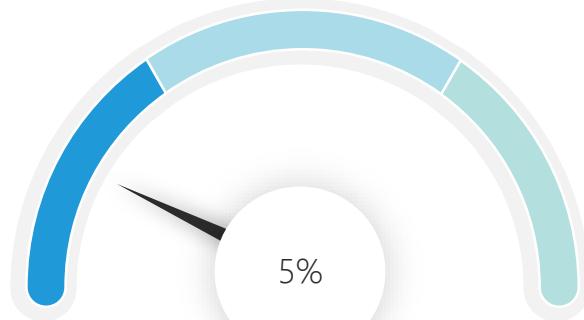

MONTH 4

MNI TOKEN

Token holders qualify for 5% release of their token in the fourth month.

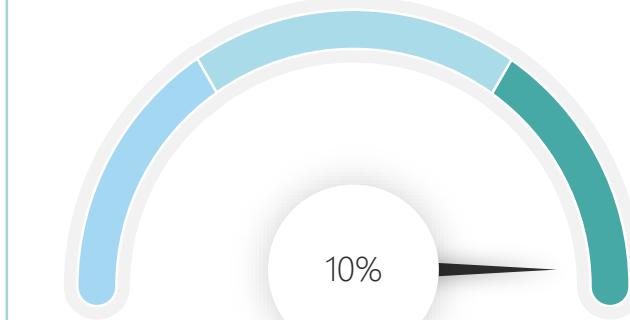

MONTH 5

MNI TOKEN

Token holders qualify for 5% release of their token in the fifth month.

MONTH 6 ONWARDS

MNI TOKEN

Token holders qualify for 10% monthly release of their token from the sixth month onwards until fully unvested.

GOVERNANCE STRUCTURE

TRUSTEE

To ensure a truly Democratized Finance system is maintained within the DAO Governance, an additional element has been utilized and is referred to as a TRUSTEE

Trustee rights and responsibilities limited and acts only as a vessel of the community.

Ensures that Governance is fairly distributed and maintains balance free of corruption, attacks or manipulation.

Distributes Governance Token as per the outline prerequisites.

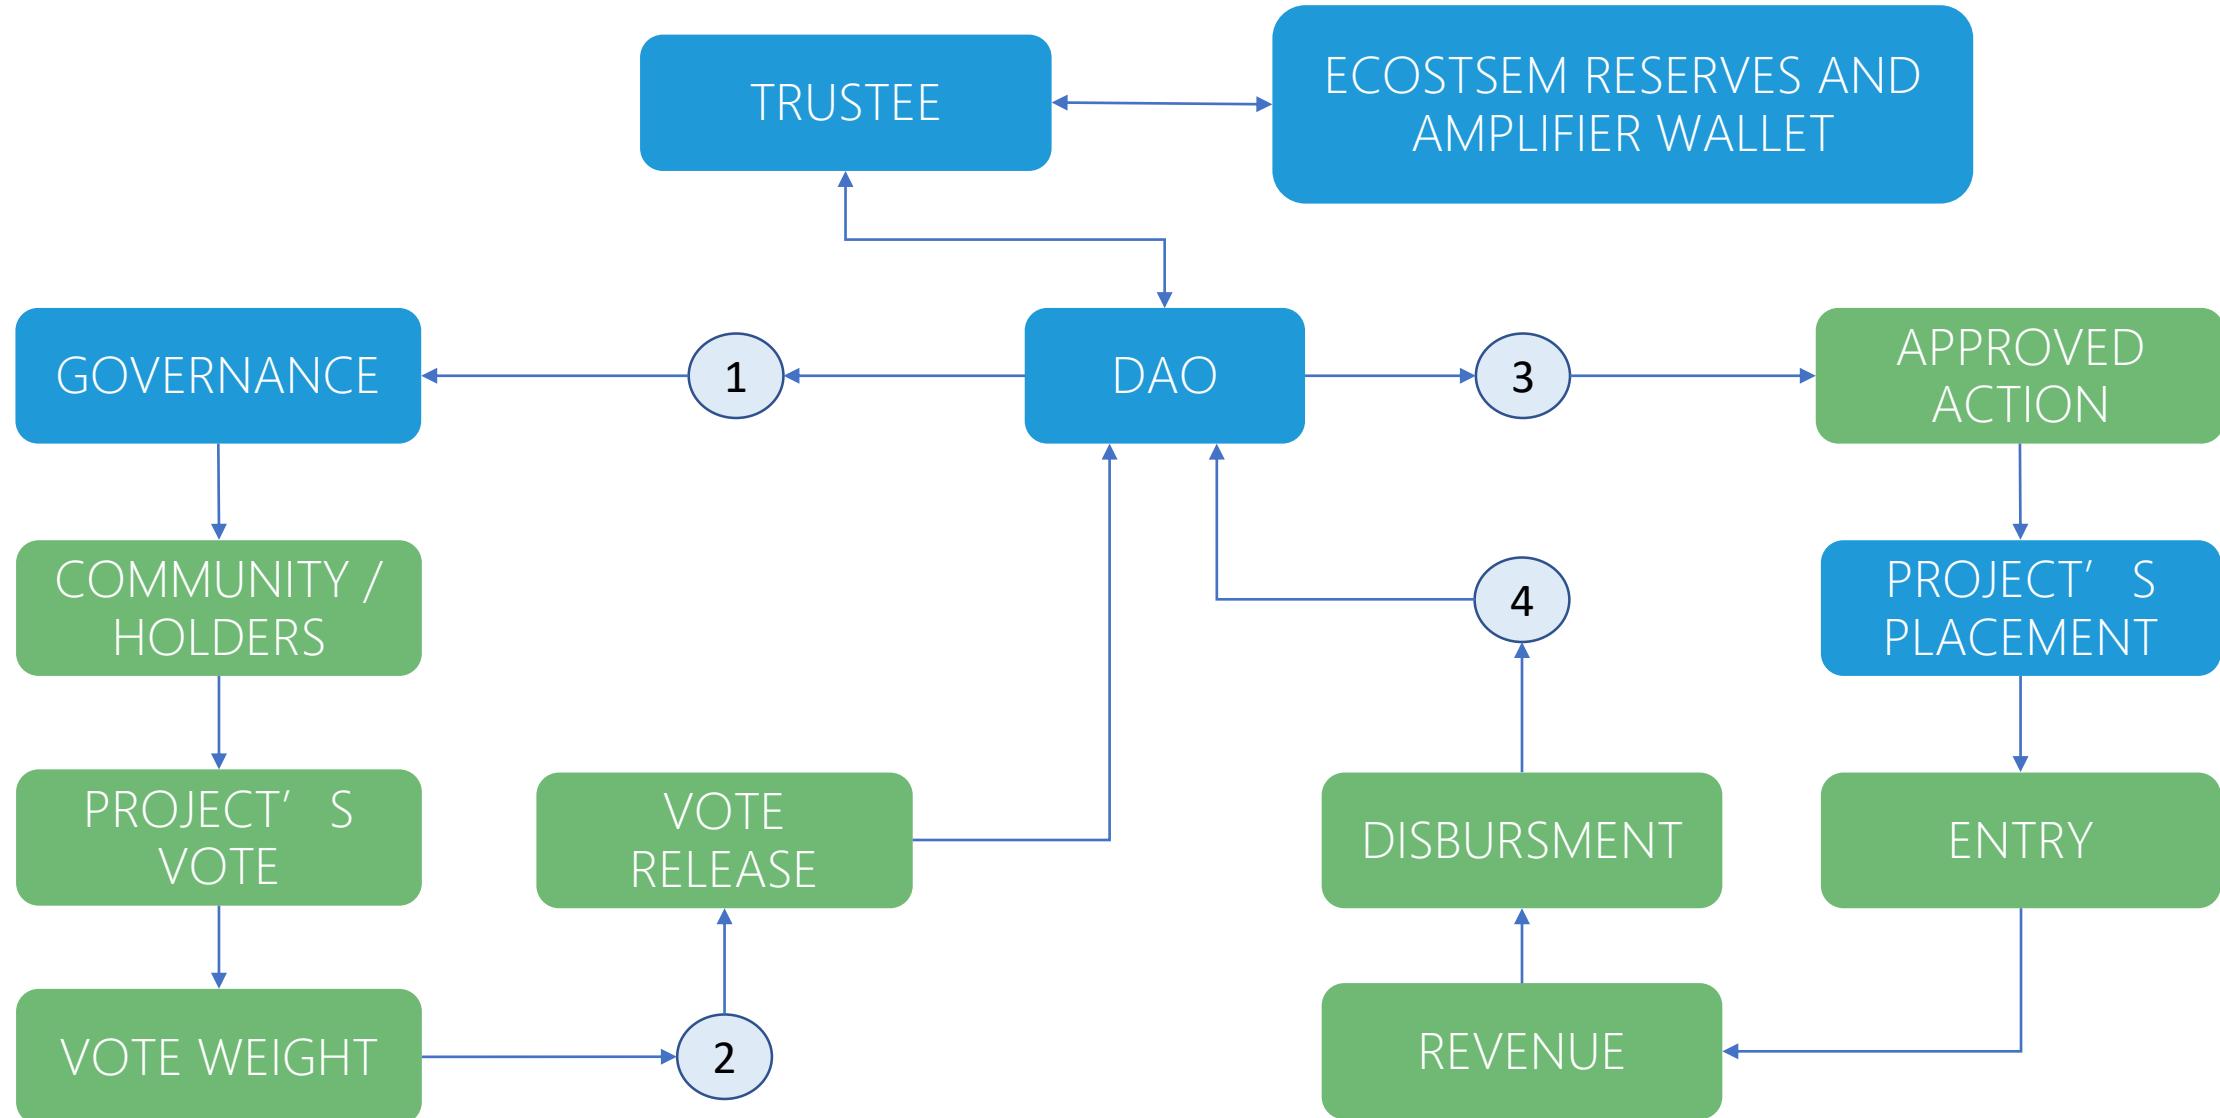

Fairly distributes supply of Governance Token to all qualifying holders, both early adopters and ongoing growing holders.

Trustee dilutes it's oversight rights as community grows and effectively is exited at the point of community reaching scale and maturity

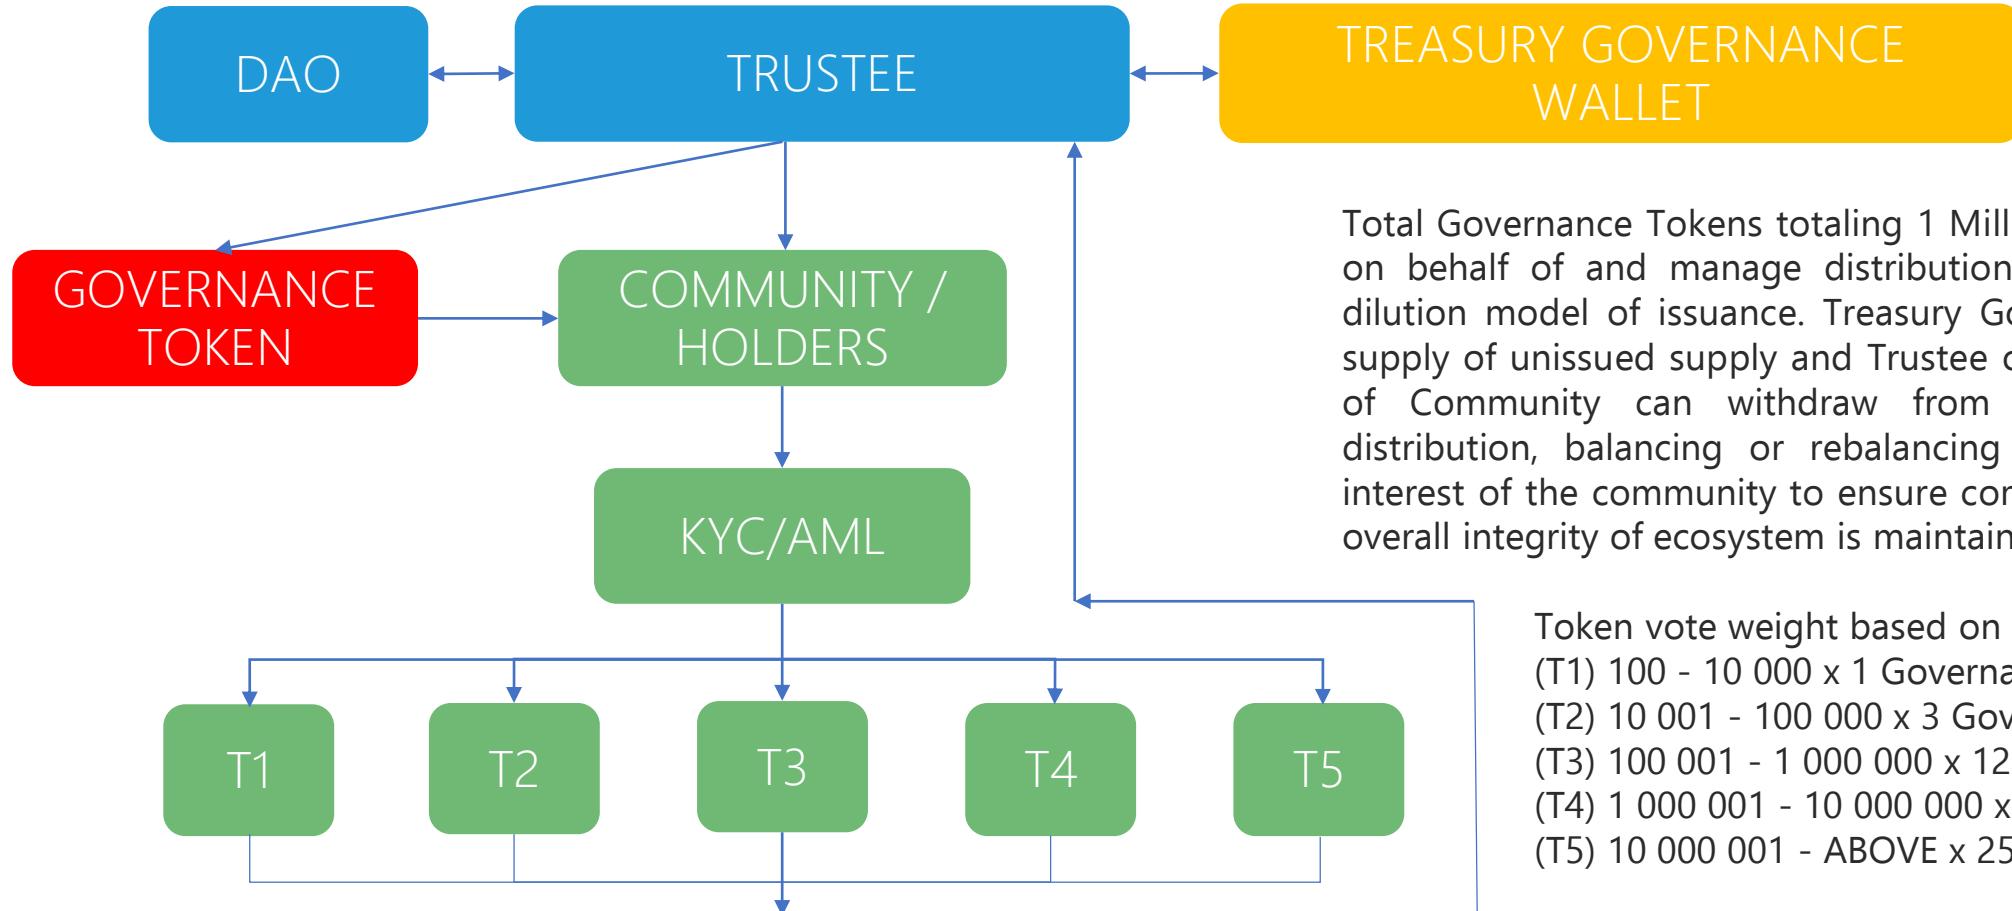

This is achieved when total supply of Governance Token is fully distributed to MnI holders, at this point the Trustee become redundant within the DAO and only be active in the Resolution Council (refer to whitepaper).

GOVERNANCE STRUCTURE

GOVERNANCE STRUCTURE

Total Governance Tokens totaling 1 Million, Trustee to hold 100K on behalf of and manage distribution to Community using a dilution model of issuance. Treasury Governance wallet to hold supply of unissued supply and Trustee on requirement on behalf of Community can withdraw from supply for community distribution, balancing or rebalancing can be applied in the interest of the community to ensure community is protected and overall integrity of ecosystem is maintained.

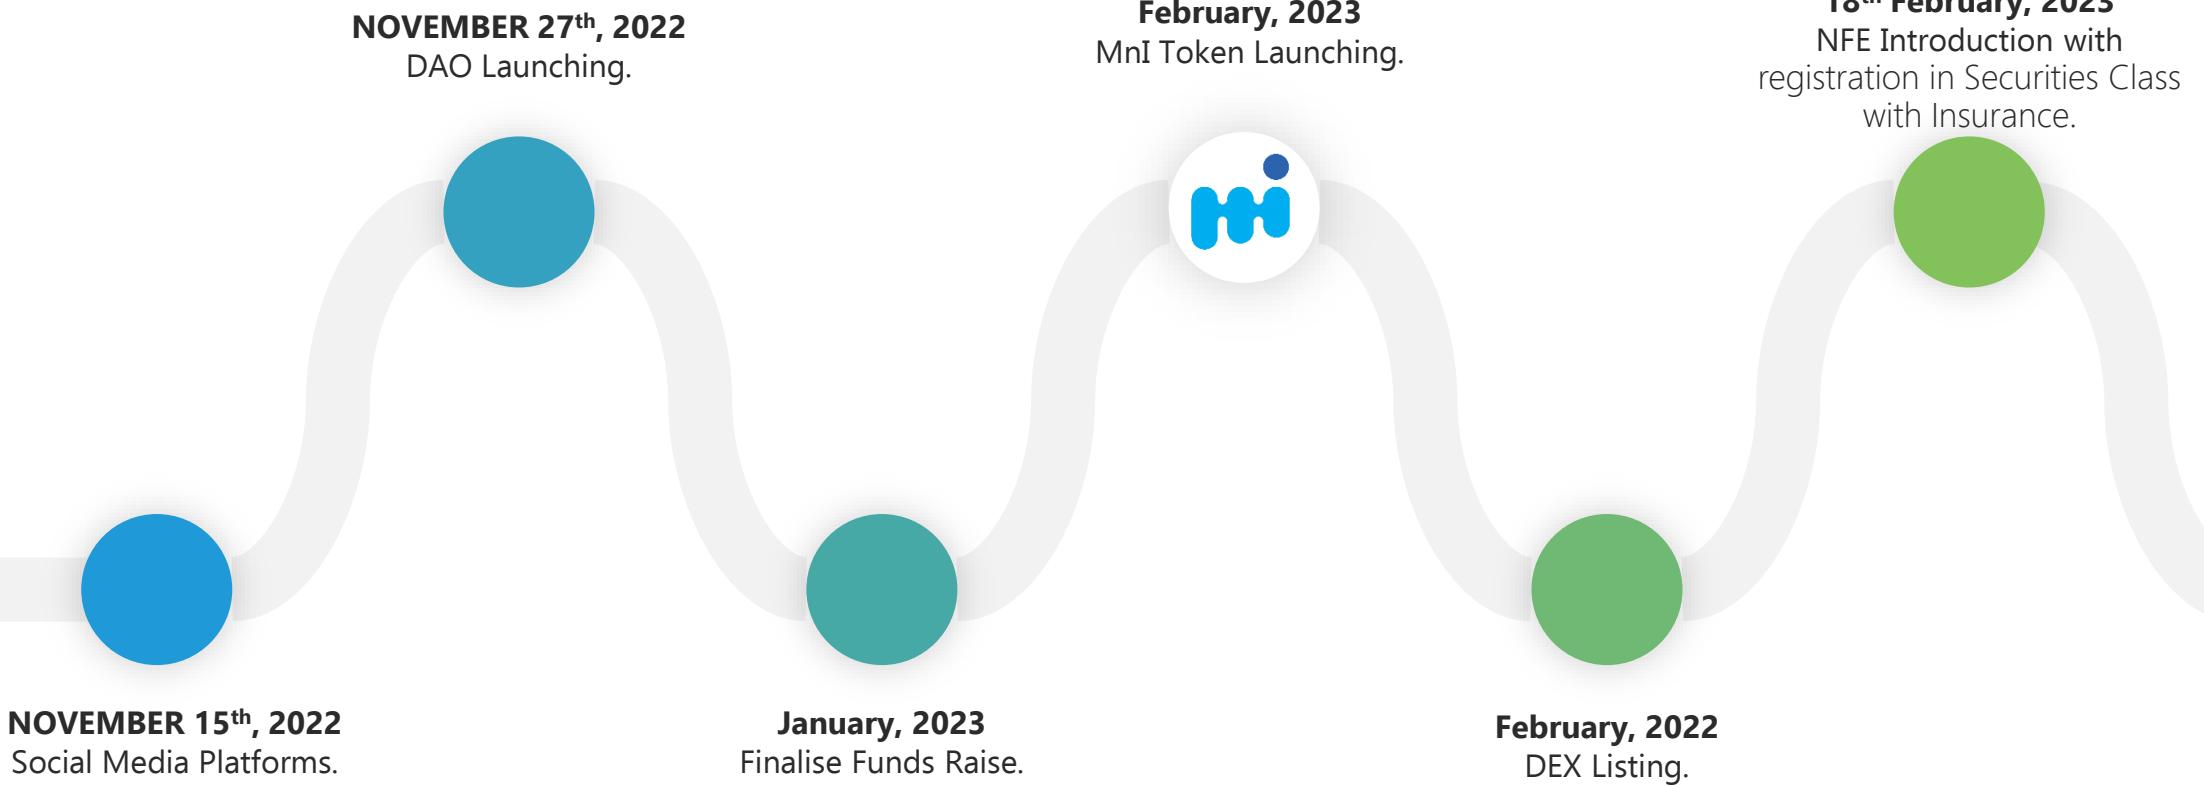

Token vote weight based on MnI held and staked
(T1) 100 - 10 000 x 1 Governance Token
(T2) 10 001 - 100 000 x 3 Governance Token
(T3) 100 001 - 1 000 000 x 12 Governance Token
(T4) 1 000 001 - 10 000 000 x 18 Governance Token
(T5) 10 000 001 - ABOVE x 25 Governance Token
